

# Elixir Repertoire Plugin

for  NetBeans

## Free and Easy REST-based Business Intelligence for NetBeans

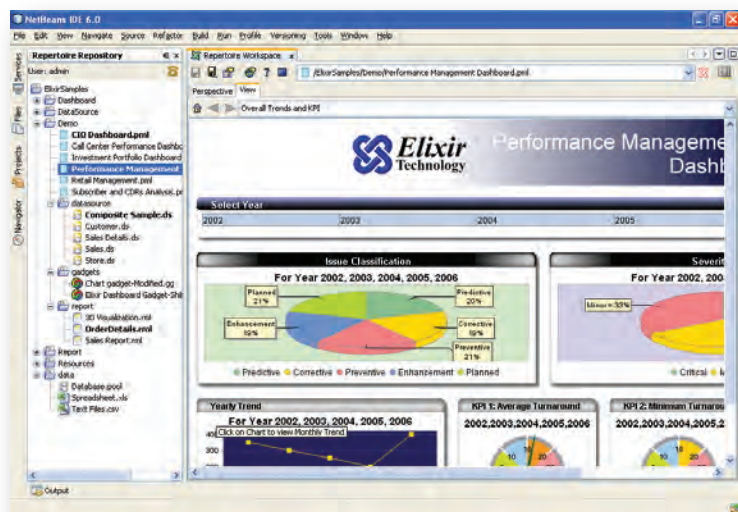

Based on the award-winning Business Intelligence (BI) product from Elixir Technology, Elixir Repertoire Plugin for NetBeans brings powerful BI development to the NetBeans community.

With this free\* Plugin, NetBeans users will have ready access within the NetBeans IDE to a full range of Business Intelligence functionalities such as Dashboard, Report, Data Extract-Transform-Load (ETL) and Scheduling, beyond the basic reporting tool and component, to incorporate within their applications.

With lightweight, REST-based web services as its underlying protocol, it is now possible to easily incorporate these advanced BI functionality into any applications using any programming languages of choice, including Java, JavaFX, Ruby, AJAX, Groovy, etc, using a simple set of GET, POST, PUT, DELETE operations over HTTP or HTTPS.

Designed for integrated BI, it has nothing to integrate, just plug in and use. Simply put, it's Business Intelligence that makes sense; the free and easy way.

Create Interactive Dashboards

## Feature Highlights

- Dashboards with interactive navigational between Data, Cube, Report, Image, and Chart views
- Visual Data Designer for Complex Data Extraction, Aggregation, and Transformation logic
- Create Reports of any complexity with minimum or no coding
- Job Scheduling for Automation Jobs with drag-and-drop support

Design Professional Reports

\*The Plugin is free, as in free beer, for development use. To deploy and Runtime or Server to production environment, Elixir offers affordable licensing scheme ranging from one-time fee for unlimited distribution of Runtime to processor-value based licensing for unlimited user connections to the Server.

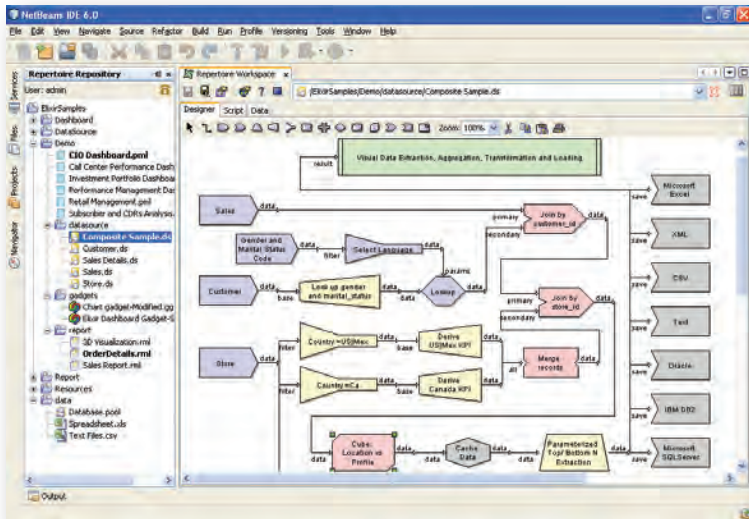

\*\*The Plugin has been tested with NetBeans 6.0, while a patch is needed to work with 6.1. Please see details in readme.html.

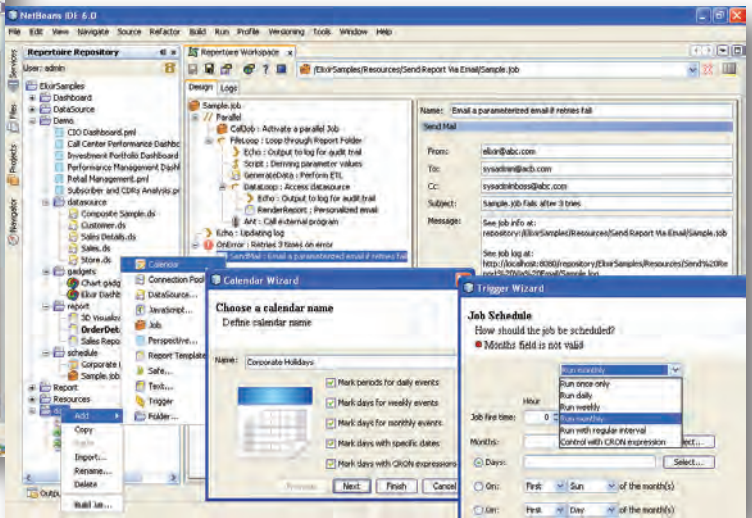

# Business Intelligence at REST Elixir Repertoire

**Simpler • More Accessible • Embeddable**
